| DOCUMENT ID | UCB-01-PERSONAL-SECURITY |
| VERSION | 1.0 |
| DATE | 3 November 2026 |
| AUDIENCE | Individuals, including professionals who travel |

## At a glance

| | |
|---|---|
| **Who it is for** | Individuals who want to know what affects the places they live, work and visit, and who want a second look before replying to or paying on a message they are not sure about. |
| **Outcome** | Only the events that touch your places and trips, each with why it matched, plus a second look at messages and links. The decision stays with you. |
| **Package** | KAIA-OR Individual |

## The challenge

General news and generic alarms are rarely about your street, your office or the city you fly to next week. When so much sounds alarming, people either worry about all of it or start ignoring it, and the one event that matters is easy to miss.

At the same time, messages that impersonate a relative, a delivery company or a financial institution keep arriving. Their warning signs are familiar once you know them: requests for sign-in details or demands for money. Most people only realize a message was not real after they have replied or paid.

> In 2025, people filing internet crime complaints with US authorities reported $20.877 billion in losses, up 26% on 2024, and phishing and spoofing was the most reported complaint type, with 191,561 complaints.[1]

# What changes with KAIA-OR

### Only what touches your places and trips

Hazards, security incidents, disruptions and cyber events are matched to the places you save and the trips you plan, each with why it matched and how well it is corroborated. Matching runs on your device.

### A second look before you reply or pay

Paste a message to see the warning signs KAIA-OR recognizes. Check a link while it stays unopened. You see what looks wrong, when the check can’t tell, and a suggested next step, such as confirming through a channel you already trust. The decision stays with you.

### A look around you, when you ask

Start a check of the events around you from one fresh position. The position is used only for that check and is cleared when you stop.

### Ask Hey KAIA what it means for you

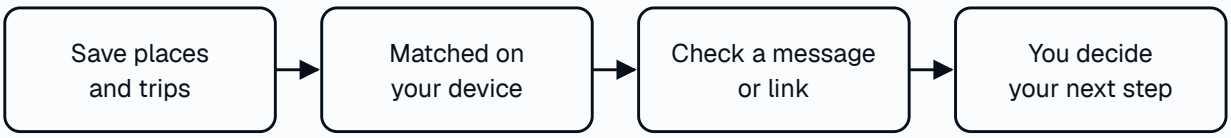

By voice or text, in English, French, Turkish or Hebrew. Answers are worked out on your device first and cite their evidence.

### What you see

| Item | What it shows |
|---|---|
| **An event that touches a saved place** | Category, severity, place, time window, confidence, source and corroboration status, and the reason it matched your place or trip. |
| **A message check** | The warning signs recognized in the text and a suggested next step. |
| **A link check** | What in the address deserves a closer look, with the link left unopened. |
| **A Hey KAIA answer** | What the event or message means for you, with the evidence it rests on. |

# How it works

A personal picture that starts with what you choose to save.

1. You save your home, your workplace and the city you are travelling to next month.
2. When an event published by official and authoritative sources concerns one of those places, KAIA-OR shows it with its severity, confidence, corroboration status and why it matched.
3. You ask Hey KAIA, by voice, what the event means for your trip. The answer cites its evidence and relays the publisher’s own guidance.
4. Later, a message that claims to come from a delivery company asks for money. You paste it in and see the warning signs and a suggested next step.
5. You check with the sender through a channel you already trust, and decide for yourself.

## Privacy and control

- Your saved places, the messages and links you check, and your questions to Hey KAIA stay on your device.
- Your exact location stays on your device. A look around you uses one fresh position, and it is cleared when you stop.
- Nothing goes to cloud AI unless you agree first.
- KAIA-OR checks only what you choose to paste. It does not read your inbox or your other apps.

## Honest boundaries

- KAIA-OR shows warning signs and evidence. It does not issue an all-clear for a place, a trip or a message.
- On hazards, KAIA-OR relays the publisher's own guidance and never writes its own safety instructions.
- Coverage depends on what official and authoritative sources publish. Reports that cannot be corroborated are labelled as unconfirmed.

## Editions and related use cases

Personal security is part of KAIA-OR Individual, and each adult in a KAIA-OR Family space has the same personal picture. KAIA-OR runs on iOS, iPadOS, macOS, Android phones, Android TV, Windows and the web, in English, French (Canada), Turkish and Hebrew. One account works on every platform, with the same features and the same privacy rules.

### Related use cases

- Scam and phishing checks
- Travel risk
- Family safety
