KAIA-OR · DATASHEET · TEAM

No security team? Check payment requests and see what affects your sites.

Your sites in one shared picture for the people responsible for them. Each member gets their own alerts, and a second look at messages that ask for money.

DOCUMENT ID	DS-TEAM
VERSION	1.0
DATE	3 November 2026
AUDIENCE	Small and mid-sized organizations without a dedicated security team

Who it's for

Owners and managers of small and mid-sized organizations with a shop, an office or a warehouse, and no security staff. KAIA-OR Team is the same KAIA-OR, from one person to a government agency, packaged for teams: a shared picture of your sites, a second look before anyone pays, and membership you can account for.

The challenge

- **No security staff.** Without an operations centre or an analyst, nobody has the time to sort the events that touch your premises from those that do not.
- **Invoice and payment fraud.** Fake suppliers and impersonated managers ask for money in ways that look routine: a changed account detail, a new invoice, a request from "the boss".
- **Learning about local events after the fact.** A flood or a disruption near a site is often noticed only once it has already interrupted the working day.

> 43% of UK businesses reported a cyber security breach or attack in the previous 12 months, and 85% of those businesses experienced phishing.[1]

What you get

Your sites, one shared picture

Events that touch a shop, office or warehouse appear on the site they affect, with severity, how well they are corroborated, and why they matched. An organization adds its sites to its shared picture, and each person's own saved places stay with them. Which official alerts a site can show depends on its country; the Features page on the KAIA-OR website lists them.

A second look before anyone pays

When a supplier's changed account details or an unexpected request to move money arrives, paste the text in and see the warning signs and a suggested next step. Links and attachments stay unopened. You see what looks wrong, when the check can't tell, and what to do next, such as confirming through a channel you already trust.

© Kaia Technologies, Inc.

Membership under control

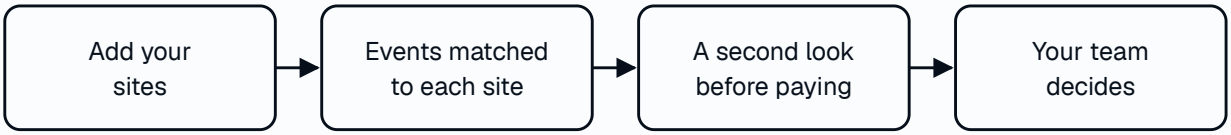

Roles manage membership, not people. Each colleague has their own sign-in and joins with a single-use invitation bound to their account, which you share through a channel you trust. Owners and Administrators see account IDs, roles, join dates, invitations and access-review records, download dated access reviews, and see who changed what, and when.

Read-only API

Send the events that touch your sites into your own tools through a read-only API.

A day with KAIA-OR

One shared picture of your sites, and a second look for each member.

1. The owner adds the shop, the office and the warehouse to the team’s shared picture.
2. When a flood warning from official and authoritative sources concerns the warehouse, it appears on that site with its severity, corroboration status and why it matched.
3. Each member also gets their own alerts for their own trips.
4. When an e-mail that appears to come from a supplier asks to change where money is sent, the bookkeeper pastes it in and sees the warning signs and a suggested next step.
5. The bookkeeper calls the supplier on a known number before any payment is made.

Privacy: what you see, and what stays with each person

- Roles manage membership, not people. Membership never grants access to another member’s messages, devices, location or saved places.
- The organization sees its sites, not its people’s whereabouts. These membership boundaries, and the isolation between organizations, are enforced at the application layer.
- The messages and links each member checks stay on that member’s device.
- Nothing goes to cloud AI unless you agree first.

Platforms and languages

Platforms	iOS, iPadOS, macOS, Android phones, Android TV, Windows and the web.
Languages	English, French (Canada), Turkish and Hebrew, with full right-to-left layout.

One account works on every platform, with the same features and the same privacy rules.
